Ferdinand Barbasiewicz, the author autoclave methods of therapy, Poland

In July 1993, Head of Department of AIDS in Warsaw offered me to test the effectiveness of my method clavitherapy in the fight against HIV/AIDS. The proposal stemmed, among other things, the knowledge of my method, which shall be abolished in acquired immune deficiency syndrome in patients with multiple sclerosis. REF. Neurophysiological operations involving stimulation klawikami receptors and biologically active points include acupuncture in the skin of the coating overall man. After the dermoviceralne processes can be precisely controlled self-healing (self-repairing) the homeostasis of internal organs and physiology of the organism also in rebuilding resilience in the dimension of all blood parameters, e.g. Anemia, leukopenia, thrombocytopenia, including even the reconstruction of lymphocytes general, T4 lymphocytes, T8. When, in a few days we will rebuild the blood that can efficiently and effectively treat a variety of disease entities, also resistant medicaments. These problems I am constantly interested. In the 80s at the Hospital for Infectious Diseases in Warsaw at ul. Wolska worked experimentally with prof. Assoc. med. Witold Brzosko known immunologist. For many years I carry out research that under clinical conditions give very good results in the negotiations the health of patients in infectious diseases.

As we know, the thymus gland, responsible for the production of lymphocytes in the development process, disappears during adolescence young man. We also know that the “production” of lymphocytes in the body is continued by other organs, the endocrine glands and morphological structures of the body of an adult. I have also developed algorithms and network operations klawiterapeutycznej stimulation - stimulation of these processes in a sustainable and efficient reconstruction activating the immune system, where there has been acquired immune deficiency syndrome. There is a possibility of precise control cells and other antibodies local and general systemic.

In February, I told the head of the Department of AIDS, Dr. namely I Musabbir and prof. Babiuchowej that seriously think about on this proposal. Earlier, I want to get acquainted with the literature of the problem. At the beginning of April 1993 I reported to the Department of Management and I said that I am willing to take the experiment. Clinical conditions have been established. I was selected patient - MA, aged 25, who nodules in a very critical state of health. The basic condition was to make all the necessary medical tests and the exclusion of all drugs in clinical ordynatury from the start of the experiment. As we know, HIV / AIDS, there are no effective drugs.

And data illness MA, aged 25, a patient of AIDS Clinic in Warsaw on the day 15.04.1993r:

1. Since 1986. Took drugs, drank alcohol and smoked cigarettes, himself dished “compote” - even when you stay at the clinic.
2. Is HIV - established in 1989. Syndrome ARC was found in 1992.
3. Liver disease: the first hepatitis B was found in 1989. Since 1991. Is suffering from hepatitis “C”. Cirrhosis of the liver and elevated transaminase seven times, dangerously low levels of blood smears for human health.
4. Pain in the kidneys and bladder, difficulty in urinating, urethritis, very frequent urination in small amounts.

5. pains and stinging spleen (USG: spleen 14 cm).
6. Very annoying diarrhea (from 4 to several bowel movements per day) for the first few months of this year. Despite the weight of drugs remained at a level of 50 kg at growth of 175 cm.
7. Oral candidiasis since 1989.
8. Many chronic herpes and inflammation of the facial skin.
9. Persistent, very intense, thick dandruff and hair loss.
10. Numerous chronic purulent skin eruptions on the surface of the body, especially on the back, buttocks, chest, neck and face.
11. A very strong perspiration on the whole surface of the skin. Sweat droplets.
12. The icy upper and lower extremities and back, groin and buttocks.
13. Chronic and very enlarged lymph nodes (one even operated on).
14. Thrombocytopenia (30 thousand. Platelet mm³) - frequent nosebleeds.
15. Solid sore throat and difficulties in swallowing.
16. Very frequent head- aches abnormal EEG in 1990.
17. Chronic otitis media caused by *S. aureus*.
18. Sinusitis, nasal obstruction - a very common rhinitis.
19. I still persisting elevated body temperature – 37.5 (often exceeded 38).
20. The continuing very low pressure and diastolic peripheral - 90/60.
21. The overall sepsis body.
22. Psychiatric Symptoms: insomnia, depression, aggression, anxiety, obsessive, emotionally very strong ambivalence - emotional anger, aggression and helplessness

On 16 April 1993, we began an experiment clavitherapy to the exclusion of all drugs. Given the very difficult housing conditions in the AIDS Clinic at ul. Wolska Street in Warsaw, treatments clavitherapy was doing in the courtroom AIDS and tuberculosis. Tests and treatments clavitherapy was doing filantropijnie.

The first days up to 2 weeks treatment lasting 4 - 5 hours a day and were very painful. Despite extremely strong pathogenesis, caused very severe conditions AIDS (cases of tuberculosis) and the extremely difficult housing conditions, yet in the first 5 weeks of resolved all w / these disease entities, which confirms history of the disease and analysis of medical examinations. Clearly improved, inter alia, the general levels of lymphocytes and other analytical results concerning the morphology of blood smear general and even T4 and T8 lymphocytes, liver, and others. Some blood tests were performed initially 2 times a week. After 5 weeks, when the state of health M.A. returned to full fitness physiological analysis was performed 1 x per week and less often. The wealth of research material blood analyzes - data can be found in the Archives of AIDS Clinic at ul. Wolska Street in Warsaw and at the Centre clavitherapy.

Due to the strong pathogenesis of disease patients and combining different, very heavy conditions AIDS (6 people in one room), patients were not allowed to practically go out and stay in the hallway. There is no common room and base psychotherapy. There is no question of going beyond building the X pavilion, fresh air, therefore the lack of any recreation.

These conditions and very good health outcomes for patients conducted only clavitherapy meant that I turned to the Head of the Department of AIDS to transfer MA Re-adaptation to the Centre of the Ministry of Health and Social Welfare to them. St. John of Jerusalem in Piastów. My request was accepted and head of the Department in consultation with the Director Fr. Arkadiusz Nowak, after a month of treatment put MA Piastow on 17.05. 1993, where I carried further treatments clavitherapy. Terms clinical and psychotherapy at the Centre in Piastowie are very good.

Comparative Analysis of Results Statements Medical

Details of 21.V. 93 r. After 5 weeks of treatment clavitherapy in AIDS Clinic

Details of 16.VI. 93 r. On clavitherapy treatment without drugs Piastowie.

Written Reports by the Patient M. A., age 25

May 3, 1993 r.

Clavitherapy impact on me.

I was treated by nailing the third week. In the course I do not accept any medications. Drugs are weaned interferon - 900; essential forte 3 x 1; Relanium 0, 005 - 19 tablets per day; Lamalin to 3 tablets a day.

My state of health before by stitching: I am HIV positive since 1989., Went through BC delta hepatitis, hepatitis C now have come to the hospital because of otitis media, attacked by Staphylococcus aureus, diarrhea, night sweats, weight loss, weakness, ringworm oral herpes.

After 16 treatments p. Doctor, I can say: cessation of diarrhea, sweating, and otitis there is no trace, improved blood clotting, I gained weight more than 10 kg, disappeared herpes and have decreased lymph nodes.

This therapy has allowed me to also put an end to smoking addiction, lekomanii, drug addiction (iv fetch "compote"). Almost at the same time put down all these stimulants, this period of abstinence has lasted 20 days and despite various situations zagrożeniowych do not feel strong hunger pains.

M. A.

W-wa, 16/05/93

I am a 25-year-old drug addict. HIV was found in my body in 1989. At the same time I succumbed to infection with type B and Delta. In 1991, ABC infected by the virus, which caused a chronic, progressive inflammation of the liver lasting to this day. This condition showed a liver biopsy in 1991. Dimphladenopatii found in the same year, and the ARC year later. Since the beginning of infection health status worsened. Frequent diarrhea, night sweating, increased body temperature steadily to 37.5°C (fixed), headaches, arthritis, highly visible lymphadenopathy.

Prior infection with HIV diagnosed with high content of protein and calcium in the urine szczawniaków and strong enlarged lymph nodes - since 1985. This involved ingesting large amounts of drugs intravenously. In 1990, he was found abnormal EEG and damage to the peripheral nervous system. During the hunger contacted the clinic in Wolska, I was treated with AZT (1990. - Two months) and Interferon and since 1991.

In April of 1993. I was admitted to the Infectious Diseases Hospital in Warsaw with diagnosed otitis media caused by S. aureus, diarrhea and general exhaustion of the body.

With the growth of 175 cm weighed 50 kg. During the hospitalization, I was treated with drugs: Interferon - 6 Plates. and 150g Essential 3 x 1, 3 x 1 doxycycline; the abolition of withdrawal symptoms Relanium was taking 95 mg (19 tablets and 5 mg Reasec 6 x 2 tablets.

April 16, I was offered treatment by Dr. clavitherapy Barbasiewicz. At the same time I put down all medications. After a few days I felt much better. Gone were the ear ailments, diarrhea, sweating, literally bursting with energy me - suspected me about taking amphetamines. I arrived at a weight of about 15 kg. I broke up with all addictions, including cigarettes, without physical withdrawal symptoms. At the same time improved very significantly the results of medical examinations (for inspection at the Dr. Barbasiewicz).

M. A.

W-wa, 1.07. 1993.

I am 25 years old, 8 years I was a drug addict. Lately, ie. To April, my daily dose of the drug is about 4 cm 3 compote + diphergan amp + amp. morphine. Got infected with HIV in 1989, A test result received in September of this year. At the same time I grafted itself hepatitis B.

In 1990. It was found thrombocytopenia, which were treated with AZT. After two months of treatment, the drug was discontinued. I was diagnosed as HbA and HbC in 1991.

A liver biopsy found a chronic, progressive inflammation of the liver, which treated since 1991. Interferon alpha. In 1992, he was found toxoplasmosis - took Rovamycinę in the amount of 3 x 300,000 j. In April 1993, came to the hospital on Wolska with otitis media caused by staphylococcus, very frequent diarrhea up to several bowel movements a day.

I weighed 50 kg with an increase of 175 cm, night sweats, cold sores and other symptoms. I also bothered by pain in the liver, kidney, head. With psychological problems: insomnia, depression, high aggression.

April 15 got under the care of Dr. Barbasiewicz who treats me by clavitherapy.

One of the conditions of treatment with this method is the withdrawal of all toxins as sedative drugs, alcohol, drugs, cigarettes, which I did. In the hospital on Wolska Relanium I received 19 tablets a day, 3 lamoliny, 3 caps. Doxycycline, 6 tablets Interferon and drip.

Of all the drugs I gave up giving up clavitherapy in consultation with doctors clinic. After 7 weeks, the physical condition is much better. After otitis media, herpes, diarrhea, sweating no trace. All lesions including lymph nodes, which declined, retreated inflammation.

During this period I do not smoke, I do not use drugs and I do not feel discomfort with this title. I weigh 65 kg, the condition I have excellent, excellent appetite, urination and stool normal healthy person. During the treatment the patient M. A. concealed from me the current results of medical examinations. It made without the knowledge of management of the Department of AIDS patient exported to private laboratories of medical examinations in order to obtain clinical evidence of blood.

Excellent mental health treatment also binds this method. I hope that after completion of the treatment and training of me I could work with Dr. Barbasiewicz.

M. A. The patient is still alive.

An interesting from the point of view of bioethics is the fact that the patient has It was the next few months, monitored by doctors Clinic EDIS, and his health was very good. After all, was not made available to me the results of the medical examination. The management of AIDS Clinic in agreement with certain professors departmental Institute of Infectious Diseases, the patient moved MA in a hidden way to a resort somewhere in the vicinity of Gdansk. At the same time he stated categorically that no prohibition on contact with me and the press. If you break this ban will never be admitted for treatment as necessary. After five years, I was able to determine the patient's address concealed and secretly brought it to the Centre clavitherapy - Source and I presented him a person with a discussion of the experiment in 1993 in front of a large group of doctors on the course autoclave treatment.

I have a very detailed account of the established video from several hour meeting at 5 years MA with a group of doctors. M. A. publicly confirmed the outrageous behavior of doctors and professors from the Department of AIDS and after staying at the Centre led by Father Arkadiusz Nowak in Piastów k/Warszawy, which for many years was a consultant successive ministers of Health Affairs. AIDS.

Dear Friends, according to American studies in healthy human blood circulates three million different types of molecular endogenous factors, including about 100,000 of selective antibodies (own determination, I have clinical evidence). Furthermore, in the blood it is approximately 10 million submolekularnych neurochemical transmitters and neurotransmitters. All molecular factors, antibodies, and neurochemical transmitters submolekularne are controllable biocybernetycznie non-invasively through the skin receptors innervated collagen fibers, a plurality points of biologically active agents, including kriogenne, acupunctura and nervous system. The whole method clavithery you explore and experiment more than 50 years of verification in the clinic, I took methodically at 1100 algorithms with the network operations quantified medical diagnosis in books: clavithery and Atlas clavithery. Generally characterizing clavithery method should be adopted as the art of stimulation (bodźcowania) klawikami, similar to years. Clavus = nail in the control dermo repair processes wisceralnym impaired molecularly neglect and ischemia homeostasis of the human body. The second clinical achievement, and even my discovery was precisely determine the etiological functional and structural disorders of the nervous system which are the main causes of many different diseases resistant medicaments. In 80 of these in the Department of Neurology, University Hospital Interior Ministry in Warsaw developed an effective and simple method of liquidation within a few days of demyelinating disorders of the brain and different kinds of peripheral nerve fibers and neurons paralysis induced glioma malignancy earliest changes that are also resistant to medicaments. The range of effectiveness clavithery is expressed in brief accompanying publication entitled. Distant future molecular medicine available today. It also applies to CPR and a defibrillator and resuscitation with no chest massage. Currently, there are several masters clavithery and are open two theses at Medical Universities. It is prepared in the fourth edition clavithery, I do not have money for printing. Waiting in the near future the successful implementation of the method clavithery in programs of education, research and specialization in medical schools, please kindly refer to the position of the Polish Medical Association. Please read the attached publications. Please see the links of short films: ATVN on www.klawiterapia.com and opinion PTL authorities, a short film www.youtube.com/watch?v=ymZOfeYLDtk www.instytutklawiterapii.com/yt. At the same time I announce that the Center clavithery - Source have a lot of documents that represent clinical evidence of my actions. In addition, please enter the Google j. English Clavithery where you can see how widespread method clavithery in the world. More information is in / on p. Inter. Yours faithfully combine the best greetings. Ferdinand Barbasiewicz, author clavithery methods and e-books: NGE XXI CENTURY (re. The objective, technically simple low-cost possibilities for the reconstruction of neglect of environmental and man-made climate).
