Explain what is the global phenomenon of the effectiveness of the biocompatible clavistapy molecular method in medical disorders completely resistant to medical and physiotherapy

Publication of the Klawiterapii Center and the Institute of Klawiterapii, Dr. Ferdinand Barbasiewicz, Poland

Ladies and gentlemen, the molecular method of biocybernetic clavistapy, non-invasive is discovered and developed by its author Dr. Ferdinand Barbasiewicz since the early sixties and verified also in clinical conditions. And according to some of the outstanding molecular biology and biocybernetics researchers in England, USA, Canada, Italy, Japan, Dr. Ferdinand Barbasiewicz assumed in those years that the innumerable cosmic molecular endogenous factors and sub-cellular drivers produced in cells and tissues are circulated in the blood of a healthy person. endogenous levels. All the molecular factors, and there are 3 million of them as the data from the US 2007 study and submode the drivers, and there are about 10 million of them created by UNIVERSAL NATURE. Clinical medicine in diagnosis has a knowledge of just over 300 molecular endogenous factors and neurology knows only three neurochemical relays. The author of the clavutive method, as early as in the 1960s, said that this particular cosmos is controlled by planned biocybernetic stimulation in dermowisceral, dermal-internal processes. Actively stimulating the clavicle (lac clavus) or sharp sticks for skewers and well-known toothpicks for various skin receptors, numerous biologically active points, also cryogenic, acupuncture, meridians and new points, which, with careful medical diagnosis of a particular disorder indicate ... female mosquito in spring and summer in our latitude.

What do you need to do to help plan and effectively help a man who has a medical disorder that is completely resistant to all medical and physiotherapy?

1. Depression and careful brain sting, the abolition of neuromuscular trauma in the organ, read in the book Klawiterapy in Chapter IX and see in the Atlas of Claviterapy p. 38 and respectively;
2. Detoxification of the body (lung, liver, and decompression of heavy metals, read in the book of spleen-pancreas meridian, S-T 13 in the book Klawiterapy and see clavithery in the Atlas);
3. To abolish the first and second pituitary gland disorders, read Chapter IX, and see in the Atlas of Clavithery;
4. In the 1980s, visual diagnostics on the skin of a man with neurological conduction disorders, which can be seen as algostatic pain-killers with hyperalgesia and alpha-dystrophic dead spots without a feeling of neuropathy in the brain and peripheral nerve fibers, and a few days' Nerve signals with clinical confirmation of EMG, according to a sensational discovery of the author of clavithery, see Claviterative Atlas page 7 and read clinical evidence in the third volume of Clavatomea;
5. Diagnosis of some distal brown spots and warts, of which there is strong aggregation of carcinogenic proteins and simple lines of interstitial mesenchymal between them, glaucoma neurons in peripheral nerve fibers en route to the brain and equally sensational discovery of the author, restoration of nervous system function, p 19 and read clinical examples in the third volume of clavithery;
6. To induce planned neuromuscular endoscopic scans of neuropathies and gliomas at all endogenous levels in improving activation of enzyme-molecular processes of weakened cell and tissue functions as a key to immunological restoration, cf.
7. Elimination of inflammation with own antibodies to the lymph nodes, see Chapter IX in clavicle and see the appropriate clavicular mapping in the Atlas;

8. Neutralization through the screening of harmful geopathic radiation, excessive electrostatic radiation caused by the quality of the footwear, which isolates the human from the EARTH, as well as the harmful effects of high frequency, min. microwave ovens, cell phones, cosmic rays, excessive chemisation in the process of any combustion, excessive chemisation in food production, also applies to pharmacy, aggressive cleaning agents, etc. Read more in my e-book EDEN XXI century, ecology and climate.

The above mentioned biocybernetic health disorders are described in detail and illustrated in the latest edition of the book Klawiterapia with Atlas in three volumes published in 2017. For several years, the author's publications on the molecular biocybernetics technique have been a hit in many prestigious medical and biomedical magazines in the world, as well as in the prestigious scientific publications of the University of Kyoto in Japan.

Ladies and Gentlemen, interested in the molecular biocybernetic claviterapy method by Dr. Ferdinand Barbasiewicz, we kindly inform you that:

- Every first Saturday of the month several meetings are held at the MAZOWSZE Conference Center in Otrębusy at ul. At 9.00 am - more information: www.institutklawiterapii.com.
- Before the meeting, you can purchase the latest edition of the biocompatible claviterapia molecular biocompatibility book and see biocomputable algorithms for diagnoses of medical and functional disorders. Before the meeting you can choose the right number of clavicles, tools made of surgical steel and learn the technique of stimulation of receptors and biologically important points,.
- Watch also a short 8 minute video on YT at www.institutklawiterapii.com, where you will get acquainted with the position of the Presidium of the Polish Medical Association, also with English subtitles on the molecular biocybernetic clavist therapy method.
- Read also the e-book: EDEN XXI Century, in which Dr. Ferdinand Barbasiewicz describes the real causes of ecological and climatic hazards and how to rebuild these threats.
